## SP-1235

SP-1235 is a VGA splitter with 2 ports. It allows one PC to split the same image into 2 VGA output signals to show it on up to two monitors. Furthermore, it supports cascade by two ties.

Advantages: high bandwidth, resolution and reliability. As well as the long-distance signal-transmission, the maximum long-distance can reach 65 meters. It could be used in fitness companies, securities business, computer exhibition hall, public broadcasting and education & training center etc.

### FEATURES

- \* Transmission over long distances up to **65m**
- \* perfect for convenient wiring and improves cable utilization ratio
- \* has a strong anti-interference ability
- \* high resolution, 1920 x 1080 (max. 2048 x 1536, 60Hz, simulated)
- \* is easy to use with high reliability

## Specifications

| Type           | SP-1235                           |                      |
|----------------|-----------------------------------|----------------------|
| Connections    | Input                             | 1x HD15 male HDB     |
|                | Output                            | 2x HD15 female       |
| LED`s          | Power                             | 1x red LED           |
| Signal         | Signal type                       | VGA, SVGA, Multisync |
|                | Bandwidth                         | 350MHz               |
| Specifications | Power Input                       | DC 9V / 300mA        |
|                | Resolution                        | 1920 x 1080          |
|                | max. resolution (simulated)       | 2048 x 1536          |
|                | Dimensions (L x W x H)            | 132mm x 92mm x 41mm  |
| Farbe          | black                             |                      |
| Gehäuse        | metal                             |                      |
| Gewicht        | 0.8 kg / 1.1 kg (incl. packaging) |                      |
